## Research Experiences

### ECG Real-Time Telemonitoring with Compressed Analysis

NTU, Taiwan

Access IC Lab (Prof. An-Yeu (Andy) Wu, IEEE Fellow)

Aug. 2017 - PRESENT

- **Edge Classification:** Incorporated compressed sensing (CS), task-driven dictionary learning (predictive sparse coding) and PCA to render light-weighted classifier and overcome limited labeled data challenge
- **On-Demand Recovery** (ongoing): Design a two-stage algorithm to classify and then reconstruct only problematic signals, utilizing the information from classification stage to speed up the reconstruction algorithm
- **Hardware Design and Chip Implementation** (ongoing): Propose a hardware architecture for on-demand recovery to allow hardware sharing between classification and reconstruction algorithms

### Direction-of-Arrival (DOA) Estimation

NTU, Taiwan

Group of Electromagnetic Applications (Prof. Jean-Fu Kiang)

Feb. 2017 - PRESENT

- **Antenna Uncertainty:** Utilized special matrix structure with Khatri-Rao subspace-based Multiple Signal Classification (MUSIC) to improve immunity to uncertainties and detect DOAs with sensors half the number of sources
- **More Sources Than Sensors:** Proposed a new antenna array structure to increase the detectable number of sources based on fourth-order statistics and compressive sensing approach
- **Mixed Carrier Frequency (CF) Known and Unknown Sources:** Proposed a two-step algorithm to first estimate DOA of known sources and then joint estimate the DOA and CF of unknown sources
- **Near Sea Surface Environment** (ongoing): Consider the influence of multipath propagation (coherent signal) and sea clutter (backscattered signal from the sea surface)
